## DETAILED ACTION

### ***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-2 and 4-5 are rejected under 35 U.S.C. 102(b) as being anticipated by Fukuda (US 5,125,217).

Fukuda discloses a packaging machine comprising a cylindrical chute with means for bending a film S into a tubular form 103; a heater unit 55 for longitudinally sealing overlapping side edges (figure 1); heater driver unit 45, which moves heater unit between retracted and operating positions (figure 8); and an air cylinder 78 for controlling the compressive force of the heater unit 55 and film S. The air pressure is regulated at a specified level. Universal joint 68 allows for a further retracted position of the heater unit 55 from film S; see column 7, lines 10-15.

### ***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claim 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over Fukuda (US 5,125,217).

Fukuda discloses "different combinations of motion-communicating and torque-communicating means can be substituted." (column 8, lines 34-36). Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to substitute an additional air cylinder in place of screw axis 59 for assisting in the movement of heater 55.

### ***Conclusion***

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Reuter et al. (US 4,265,074) teach the use of a hydraulic cylinder for moving heating jaws 66 into position.
